6 API STANDARD 2000 3.2.5.8 Change in Temperature of the Input Stream to a Tank A change in the temperature of the input stream to a tank, brought about by a loss of cooling or an increase in heat input, can cause overpressure in the tank. A lower-temperature inlet stream can result in vapor condensation and contraction, which can cause vacuum.

The API Standard 2000 5th edition takes into account tank volume, liquid flow, and temperature change. It was written as a basis for the pressure control of hydrocarbons, and considered industrial tanks as well. It is this 5th edition that is probably in widest use today. In 2009, this was updated to the API Standard 2000 6th edition. Note that
