Instead, relational database structures are at the level of a logical data model. Other logical data models exist (e.g., network, XML schema, and object-oriented approaches), and each DBMS is aligned with at least one

system (RDBMS).

Many relational database systems have an option of using the SQL (Structured Query Language) for querying and maintaining the database.

Relational database - Wikipedia

Entity–relationship modeling is a relational schema database

Access Free Information

Modeling method, used in software engineering to produce a type of conceptual data model (or semantic data model) of a system, often a relational database, and its requirements in a top-down fashion.
