Motorola voice privacy is referred to simply as "SECURENET", which is a trademarked term that Motorola uses to identify their digital encryption products. There are five different basic encryption protocols, two of which have distinct variations, for a total of eight unique (and non-compatible) encryption protocols.

Motorola Two-Way Encryption Products and Protocols Disclaimer
Save time and resources managing and distributing keys across two-way radio equipment with efficient encryption technology. Two-way radio encryption is a critical aspect of compliance but doesn’t have to be tedious or redundant with software and portable solutions that eliminate manual entry, reach out-of-range units and improve security.

Encryption - Motorola Solutions Latin America - Motorola ...
At the heart of an APX radio lies the MACE security chip. The MACE is an on-board radio encryption device providing cryptographic services for all voice and data communications. It also provides a secure environment for storing encryption keys via a hardened tamper-resistant chassis that’s FIPS 140-2 Level 2 validated.
